## AGING IN PLACE REMODELING

---

The concept of “Aging in Place” has gained popularity as more and more baby boomers enter retirement. As restricted mobility and other physical limitations arise, many believe they will need to relinquish their possessions, leave their neighborhoods and check into retirement homes and assisted living facilities. However, another viable option is to “age in place.”

Some slight renovations combined with the innovative amenities available today can make your current home fully accessible and user friendly. Staying in the comfortable surroundings of your own home with control over your own schedule is a strong factor in maintaining your quality of life. Aging in Place is definitely an option to consider.

## WALK-IN TUBS & SHOWERS

---

Walk-in tubs and showers offer a combination of safety and comfort for people of all abilities. The eliminated curb of accessible tubs and showers helps people with limited mobility to walk into the tub or for a wheelchair to roll directly into the shower.

## ACCESSIBLE BATHROOMS

---

The bathroom is one room that really should be adaptable to the different needs of people with different capabilities.

A wash basin lift will enable the bathroom sink to be adjusted to varying heights as needed.

**ADA Pros** also provides custom installation of walk-in tubs and showers.

Other bathroom modifications to consider include widening of doorways and ensuring floor space allows freedom of movement for wheelchairs.

Some of the following minor changes can also make your bathroom accessible without the need for complete remodeling.

- ▶ Vanities, sinks, bathtubs and showers can be relocated or repositioned.
- ▶ Grab bars should be secured into wall studs at side of the toilet and in the tub .
- ▶ Single lever faucets are easiest to use and can be equipped with anti-scald devices.
- ▶ Toilet height is also important. Portable toilet seats may be helpful on a budget.

## ACCESSIBLE KITCHENS

---

Designing an accessible kitchen removes the biggest obstacles for persons with limited mobility by providing access to sinks, cabinets, countertops and appliances.

Automatic cabinet lifts allow adjustments to accommodate the needs for all members of the household.

**ADA Pros** can design a completely new accessible kitchen or modify an existing kitchen to maximize independence for everyone’s abilities using the highest quality products.

## FUNDING RESOURCES

---

Finding the money to pay for modifications to your home doesn’t have to be another barrier to assistive technology. **ADA Pros** can help to pursue financial assistance. We have a collection of possible avenues for aid from sources such as; the Center for Accessible Housing, the Administration on Aging, and the AARP; to name a few.

We welcome your call for all the details.
